I. GENERAL BACKGROUND INFORMATION

The Vermont Global Commitment to Health Medicaid Section 1115(a) demonstration (11-W-00194/1) was originally approved on September 27, 2005 and implemented on October 1, 2005. The Global Commitment to Health Section 1115(a) demonstration is designed to use a multi-disciplinary approach to comprehensive Medicaid reform, including the basic principles of public health, the fundamentals of effective administration of a Medicaid managed care delivery system, public-private partnership, and program flexibility.

This evaluation design is in response to the State's recent amendment, effective July 1, 2018, to support a full continuum of Substance Use Disorder (SUD) treatment and recovery services, including short term stays in treatment facilities classified as Institutions for Mental Deficiency (IMD).

As of January 1, 2017, Vermont and CMS extended the Global Commitment to Health demonstration through 2021, to further promote delivery system and payment reform to meet the goals of the State working with the Center for Medicaid and CHIP Services, and the Center for Medicare and Medicaid Innovation (CMMI). Consistent with Medicare's payment reform efforts the demonstrations allow for alignment across public payers. Specifically, Vermont expects to demonstrate its ability to achieve universal access to health care, cost containment, and improved quality of care.

Since 2005, the Global Commitment to Health demonstration has reduced Vermont's uninsured rate from 11.4 percent in 2005 to approximately 2.7 percent in 2015 through expansion of eligibility and other Accountable Care Act reforms. The demonstration has also enabled Vermont to address and eliminate bias toward institutional care and offer cost-effective, community-based services. For example, the proportion of Choices for Care participants served in the community has passed fifty percent and continues to increase. In addition, Vermont no longer has a waiting list for individuals in the Highest and High Need Groups under the Choices for Care component of the demonstration.

Due to the expansion of eligibility under the Vermont State Plan, pursuant to the Affordable Care Act, expansion of eligibility is no longer the primary focus of the demonstration. However, the demonstration continues to promote delivery system reform and cost-effective community-based services as an alternative to institutional care. The State's goal in implementing the demonstration is to improve the health status of all Vermonters by:

- Promoting delivery system reform through value based payment models and alignment across public payers;
- Increasing access to affordable and high-quality health care by assisting lower-income individuals who can qualify for private insurance through the Marketplace;
- Improving access to primary care;
- Improving the health care delivery for individuals with chronic care needs; and
- Allowing beneficiaries a choice in long-term services and supports and providing an array of home and community-based (HCBS) alternatives recognized to be more cost-effective than institutional based supports.

The State employs four major elements in achieving the above goals:

1. **Program Flexibility:** Vermont has the flexibility to invest in certain specified alternative services and programs designed to achieve the demonstration's objectives (including the Marketplace subsidy program).
2. **Managed Care Delivery System:** Under the demonstration the Agency for Human Services (AHS) executes an annual agreement with the Department of Vermont Health Access (DVHA), which delivers services through a managed care-like model, subject to the requirements that would be applicable to a non-risk pre-paid inpatient health plan (PIHP) as defined by the Special Terms and Conditions (STCs).
3. **Removal of Institutional Bias:** Under the demonstration, Vermont provides a choice of settings for delivery of services and supports to older adults, people with serious and persistent mental illness, people with physical disabilities, people with developmental disabilities, and people with traumatic brain injuries who meet program eligibility and level of care requirements.
4. **Delivery System Reform:** Under the demonstration, Vermont supports systemic delivery reform efforts using the payment flexibility provided through the demonstration to create alignment across public and private payers.

The initial Global Commitment to Health and Choices for Care demonstrations were approved in September of 2005 and became effective October 1, 2005. The Global Commitment to Health demonstration was extended for three years, effective January 1, 2011, and again for three (3) years, effective October 2, 2013. The Choices for Care demonstration was extended for five (5) years effective October 1, 2010 and became part of the Global Commitment to Health demonstration in January 2015. The following amendments have been made to the Global Commitment to Health demonstration:

- 2007: A component of the Catamount Health program was added, enabling the State to provide a premium subsidy to Vermonters who had been without health insurance coverage for a year or more, have income at or below 200 percent of the FPL, and who do not have access to cost-effective employer-sponsored insurance, as determined by the state.
- 2009: The State extended Catamount Health coverage to Vermonters at or below 300 percent of the FPL.
- 2011: The State included a palliative care program for children who are at or below 300 percent of the FPL and have been diagnosed with life limiting illness that would preclude them from reaching adulthood. This program allows children to receive curative and palliative care services such as expressive therapy, care coordination, family training and respite for caregivers.
- 2012: CMS provided authority for the State to eliminate the \$75 inpatient admission co-pay and to implement nominal co-payments for the Vermont Health Access Plan (VHAP) as articulated in the Medicaid state plan.
- 2013: CMS approved the extension of the Global Commitment to Health demonstration which included sun-setting the authorities for most of the Expansion Populations, including Catamount Health coverage, because these populations would be eligible for Marketplace coverage beginning January 1, 2014. The extension also added the New Adult Group under the State Plan to the population affected by the demonstration effective January 1, 2014.

Finally, the extension also included premium subsidies for individuals enrolled in a qualified health plan whose income is at or below 300 percent of the FPL.

- 2015: In January 2015, the Global Commitment to Health demonstration was amended to include authority for the former Choices for Care demonstration. In addition, the State received Section 1115 authority to provide full Medicaid State Plan benefits to pregnant women who are determined presumptively eligible.
- 2018: Effective July 1, 2018 the demonstration was amended to allow for otherwise covered services furnished to otherwise eligible individuals who are primarily receiving treatment and withdrawal management services for substance use disorder (SUD) who are short-term residents in facilities that meet the definition of an Institution for Mental Diseases (IMD).

A. Demonstration Goals

The State's high-level goal for all health reforms is to create an integrated health system able to achieve the Institute of Medicine's "Triple Aim" goals of improving patient experience of care, improving the health of populations, and reducing per-capita cost.¹ This is supported in the Global Commitment to Health demonstration through supporting innovative delivery system reforms, including Medicaid Accountable Care Organizations (ACO) and the development of progressive in-home and community based services and supports that are cost-effective and support persons who have long-term care service and support needs, complex medical, mental health and/or substance use disorder treatment needs. Overarching demonstration goals are described below:

- **To increase access to care:** All enrollees must have access to comprehensive care, including financial, geographic, physical, and communicative access. This means having health insurance, appropriate providers, timely access to services, culturally sensitive services, and the opportunity for second opinions as needed.
- **To contain health care cost:** Cost-effectiveness takes into consideration all costs associated with providing programs, services, and interventions. It is measurable at the category-of-service, individual enrollee, aid category, and aggregate program levels.
- **To improve the quality of care:** Quality refers to the degree to which programs/services and activities increase the likelihood of desired outcomes. The six domains necessary for assuring quality health care identified by the Institute of Medicine (IOM, 2001) are:
 - **Effectiveness:** Effective health care provides evidence-based services to all who can benefit, refraining from providing services that are not of benefit.
 - **Efficiency:** Efficient health care focuses on avoiding waste, including waste of equipment, supplies, ideas, and energy.
 - **Equity:** Equal health care provides care without variation in quality due to gender, ethnicity, geographic location, or socioeconomic status.

¹ Crossing the Quality Chasm: A New Health System for the 21st Century. Washington DC: National Academy Press, Institute of Medicine; 2001.

- *Patient Centeredness*: Patient-centered care emphasizes a partnership between provider and consumer.
 - *Safety*: Safe health care avoids injuries to consumers from care that is intended to help.
 - *Timeliness*: Timely health care involves obtaining needed care and minimizing unnecessary delays in receiving care.
- **To eliminate institutional bias**: By allowing specialized program participants choices in where they receive long-term services and supports and by offering a cost-effective array of in-home and community services for older adults, people with serious and persistent mental illness, people with developmental disabilities and people with traumatic brain injuries who meet program eligibility and level of care requirements.

B. Public Managed Care Delivery System, Investments and All-Payer Model

Vermont operates the demonstration using a managed care-like model that complies with federal regulations at 42 CFR part 438 that would be applicable to a non-risk PIHP, including beneficiary rights and protections such as independent beneficiary support systems and formal grievance and appeal procedures.

In addition to the demonstration, the State has also implemented the Vermont All-Payer Accountable Care Organization Model Agreement (All-Payer Model), Section 1115A Medicare demonstration through the Center for Medicare and Medicaid Innovation (CMMI). The All-Payer Model Medicare demonstration and the Global Commitment to Health Medicaid demonstration are expected to complement each other to support systemic delivery reform efforts. Using the payment flexibility provided through both demonstrations, alignment across public and private payers is expected. A brief description of the Medicaid public managed care-like model and current reform efforts is provided below.

Public Managed Care-Like Model

The Agency of Human Services (AHS), as Vermont’s Single State Medicaid Agency, is responsible for oversight of the managed care-like Medicaid delivery system. The Department of Vermont Health Access (DVHA) operates the Medicaid program as if it were a non-risk PIHP in accordance with federal managed care regulations. Program requirements and responsibilities are delineated in an inter-governmental agreement (IGA) between AHS and DVHA. DVHA also has sub-agreements with the other State entities that provide specialty care for Global Commitment (GC) enrollees (e.g., mental health services, developmental disability services, and specialized child and family services).

As such, since the inception of the GC demonstration, DVHA and its IGA partners have modified operations to meet Medicaid managed care requirements, including requirements related to network adequacy, access to care, beneficiary information, grievances, quality assurance, and quality improvement. Per the External Quality Review Organization’s annual findings, DVHA and its IGA partners have achieved exemplary compliance rates in meeting Medicaid managed care requirements. Departments of Vermont State government that participate in the provision of covered services to enrollees under the demonstration are outlined, in brief, below.

Department of Vermont Health Access (DVHA): DVHA, which operates the Medicaid program as if it were a non-risk PHIP under Global Commitment demonstration, has a three-fold mission:

- To assist beneficiaries in accessing clinically appropriate health services;
- To administer Vermont's public health insurance system efficiently and effectively; and
- To collaborate with other health care system entities in bringing evidence-based practices to Vermont Medicaid beneficiaries.

Department of Mental Health (DMH): The mission of DMH is to promote and improve the mental health of Vermonters and to provide Vermonters with access to effective prevention, early intervention, and mental health treatment and supports as needed to live, work, learn, and participate fully in their communities. DMH consists of two programmatic divisions: Adult Mental Health Services Division and the Child, Adolescent, and Family Mental Health Services Division. DMH has primary responsibility for overseeing the quality of psychiatric and mental health care provided for two of Vermont's Special Health Needs populations defined under the Global Commitment demonstration, including persons with a severe and persistent mental illness and children who are experiencing a severe emotional disturbance.

Department of Disabilities, Aging, and Independent Living (DAIL): DAIL assists older Vermonters and people with disabilities to live as independently as possible. It provides support to families of children with disabilities to help maintain them in their home. It helps adults with disabilities find and maintain meaningful employment, and it ensures quality of care and life for individuals receiving health care and/or long-term care services from licensed or certified health care providers. DAIL also protects vulnerable adults from abuse, neglect, and exploitation and provides public guardianship to elders and people with developmental disabilities. DAIL operates the several specialized Medicaid programs under the demonstration including, Choices for Care, Developmental Disability Services and Traumatic Brain Injury Services.

Vermont Department of Health (VDH): VDH's goal is to have the nation's premier system of public health, enabling Vermonters to lead healthy lives in healthy communities. VDH leads the state and communities in the development of systematic approaches to health promotion, safety, and disease prevention. VDH continuously assesses, vigorously pursues, and documents measurable improvements to the health and safety of Vermont's population. VDH will succeed through excellence in individual achievement, organizational competence, and teamwork within and outside of VDH. VDH's division of Alcohol and Drug Abuse Programs supports the innovated Medicaid Health Home program for Medication Assisted Opioid Treatment in partnerships and the 2018 SUD amendment with DVHA, as well as extensive outpatient and residential treatment and recovery support for alcohol and other drugs use disorders.

Department for Children and Families (DCF): DCF promotes the social, emotional, physical, and economic well-being of Vermont's children and families. It achieves this mission by providing Vermonters with protective, developmental, therapeutic, probation, economic, and other support services. To this end, DCF works in statewide partnership with families, schools, businesses, community leaders, and service providers. DCF offers specialized Medicaid services to children and families at risk of or experiencing trauma and early childhood intervention for families with children birth to age six with developmental needs.

Agency of Education (AOE): The AOE is responsible for overseeing coverage and reimbursement under the School-Based Health program. The Special Education Medicaid School-Based Health Services Program is used by the State to support health-related services provided to special education students

who are enrolled in Medicaid and receive eligible services in accordance with their individualized education plans (IEPs). The AOE is established as an “Organized Delivery System” under Medicaid and is responsible for the program adherence to all State and Federal Medicaid and Education laws and regulations.

Delivery System Investments

Under the public managed care-like model, the demonstration provides the State with flexibility to invest in health care innovations that:

- a. Reduce the rate of uninsured and/or underinsured in Vermont;
- b. Increase the access to quality health care by uninsured, underinsured, and Medicaid beneficiaries;
- c. Provide public health approaches and other innovative programs to improve the health outcomes, health status and quality of life for uninsured, underinsured and Medicaid-eligible individuals in Vermont; and
- d. Encourage the formation and maintenance of public-private partnerships in health care, including initiatives to support and improve the health care delivery system and promote transformation to value-based and integrated models of care.

In addition, CMS has provided the State with one-time spending authority to support Accountable Care Organizations and Medicaid community providers in delivery system reform through activities such as, but not limited to:

- Infrastructure improvement;
- Quality and health improvement information development and dissemination;
- Community related population health projects;
- Socio-economic risk assessment and mitigation; and
- Provider integration to build integration across physical health, mental health substance use disorder treatment and long-term services and supports.

Investment awards are expected to give preference to activities that promote collaboration, build capacity across the care continuum, consider social determinates of health, and promote an integrated health care system consistent with the framework set forth in the Vermont All-Payer Model Agreement and the Global Commitment demonstration. Specifically, the State would like to encourage ACO-based provider led reform that features (a) collaboration between providers, (b) reimbursement models that move away from Fee-For-Service payment, and (c) rigorous quality measurement that aligns with the All-Payer Model quality framework.

All-Payer Model Alignment

The All-Payer Model agreement between the State and the Federal government was approved by the Green Mountain Care Board (GMCB) on October 26, 2016 and signed by the Governor and the Secretary of Human Services on October 27, 2016. The agreement includes a target for a sustainable rate of growth for health care spending in Vermont across Medicaid, Medicare, and commercial payers, and builds on past programs like Vermont’s Medicaid and commercial Shared Savings programs. This model focuses on a set of health care services roughly equivalent to Medicare Parts A and B (hospital and physician services). The agreement includes quality and performance measurement and Next

Generation's value-based payment models, such as capitation or global budgets. The State must provide a plan in 2020 for integrating any institutional long-term services and supports in the total cost of care in the next demonstration period.

The All-Payer Model Agreement and Global Commitment Medicaid demonstration are complementary frameworks that support Vermont's health care reform efforts. Each agreement provides federal support to further Vermont's strategic goal of creating an integrated health care system, including increased alignment across payers and providers.

C. Eligibility, Benefits and Cost Sharing

Eligibility under the demonstration includes the following Medicaid and demonstration groups:

Population 1: Mandatory State Plan populations (except for the new adult group). This group receives benefits as described in the Medicaid State Plan and may receive HCBS benefits described in the STCs if they meet additional program eligibility standards.

Population 2: Optional State Plan populations. This group receives benefits as described in the Medicaid State Plan and may receive HCBS benefits described in the STCs if they meet additional program eligibility standards.

Population 3: Affordable Care Act new adult group. This group receives benefits as described in the Medicaid State Plan and may receive HCBS benefits described in the STCs if they meet additional program eligibility standards.

Population 4: Individuals receiving home and community based waiver (HCBW)-like services who meet the clinical standard in the Choices for Care program for the Highest Need Group. This group receives benefits as described in the Medicaid State Plan and Choices for Care program benefits as described in the STCs.

Population 5: Individuals receiving HCBW-like services who met the clinical standard in the Choices for Care program for the High Need Group. This group receives benefits as described in the Medicaid State Plan and Choices for Care program benefits as described in the STCs.

Population 6: Individuals who are not otherwise eligible under the Medicaid State Plan and who would not have been eligible had the state elected eligibility under 42 CFR 435.217, but are at risk for institutionalization and need home and community-based services. This group receives a limited HCBW-like service benefit including Adult Day Services, Case Management, and Homemaker services in the Choices for Care program as outlined in the (STCs).

Population 7: Medicare beneficiaries who are 65 years or older or have a disability with income at or below 150 percent of the FPL, who may be enrolled in the Medicare Savings Program (MSP) but are not otherwise eligible for full benefits. This group receives a limited pharmacy benefit including Medicaid Prescriptions, eyeglasses and related eye exams; MSP beneficiaries also receive benefits as described in the Title XIX state plan.

Population 8: Medicare beneficiaries who are 65 years or older or have a disability with income above 150 percent and up to and including 225 percent of the FPL, who may be enrolled in the MSP, but are not otherwise eligible for full benefits. This group receives a limited pharmacy benefit including maintenance Drugs; MSP beneficiaries also receive benefits as described in the Title XIX state plan.

All covered services may be subject to review and prior approval by DVHA and/or its partner departments in the Agency of Human Services, based on medical appropriateness. A complete listing of covered services and limitations are contained in the Vermont approved Title XIX State Plan, Vermont statutes, regulations, and policies and procedures.

Premiums and cost-sharing for populations 1, 2, and 3, must follow Medicaid requirements that are set forth in statute, regulation and policy. Standard Medicaid exemptions from cost-sharing set forth in 42 CFR 447(b) applies to the demonstration. The state must not apply co-payment requirements to excluded populations (children under age 21, pregnant women or individuals in long-term care facilities) or for excluded services/supplies (e.g., family planning).

Vermont charges premiums for children through age 18 in families with income above 195 percent of the FPL through 312 percent of the FPL. Premium populations are outlined in Exhibit 1-1 below.

Exhibit 1-1: Vermont Premium Populations

Population	Premiums	Co-Payments	State Program Name
Children with income > 195% percent through 237% of the FPL	\$15/month/family	N/A	Dr. Dynasaur
Underinsured Children with income > 237% through 312% FPL	\$20/month/family	N/A	Dr. Dynasaur
Uninsured Children with income > 237% through 312% of the FPL	\$60/month/family	N/A	Dr. Dynasaur
Medicare beneficiaries with income at or below 150 percent of the FPL, who may be enrolled in the Medicare Savings Program but are not otherwise categorically eligible for full benefits (demonstration Population 7).	0-150% FPL: \$15/month/person	Not to exceed the nominal co-payments specified in the Medicaid State plan.	VHAP Pharmacy; VPharm1
Medicare beneficiaries with income above 150 percent and up to and including 225 percent of the FPL, who may be enrolled in the Medicare Savings Program, but are not otherwise categorically eligible (demonstration Population 8).	151-175% FPL: \$20/month/person 176-225% FPL: \$50/month/person	Not to exceed the nominal co-payments specified in the Medicaid State plan.	VScript; VPharm2; VScript Expanded; VPharm3

D. Specialized Programs

Under the GC demonstration, Vermont is authorized to provide an array of cost-effective in-home and community services. Providers of these services must meet designation, certification and/or additional licensing requirements to be approved by the State to serve the most vulnerable of Vermont's citizens. These specialized programs are designed to support a unique group of beneficiaries, each is outlined below.

- Choices for Care: long-term services and supports for persons with disabilities and older Vermonters. The demonstration authorizes HCBS waiver-like and institutional services such as: nursing facility; enhanced residential care; personal care; homemaker services; companion care; case management; adult day services; and adult family care.
- Developmental Disability Services: provides long-term services and supports for persons with intellectual disabilities. The demonstration authorizes HCBS waiver-like services, including service coordination, residential habilitation, day habilitation, supported employment, crisis services, clinical intervention, respite and self-directed care.
- Traumatic Brain Injury Services: provides recovery oriented and long-term services and supports for persons with a traumatic brain injury. The demonstration authorizes HCBS waiver-like services including crisis/support services, psychological and counseling supports, case management, community supports, habilitation, respite care, supported employment, environmental and assistive technology and self-directed care.
- Enhanced Family Treatment: provides intensive in-home and community treatment services for children who are experiencing a severe emotional disturbance and their families. The demonstration authorizes HCBS waiver-like services including service coordination, flexible support, skilled therapy services, environmental safety devices, counseling, residential treatment, respite, supported employment, crisis and community supports.
- Community Rehabilitation and Treatment Program: provides recovery oriented, in-home and community treatment services for adults who have a severe and persistent mental illness. The demonstration authorizes HCBS waiver-like services including service coordination, flexible support, skilled therapy services, environmental safety devices, counseling, residential treatment, respite, supported employment, crisis and community supports.

Through a special provision as a Designated State Health Program, Community Rehabilitation and Treatment benefits can be extended to individuals with severe and persistent mental illness with incomes between 133 and 150 percent of the federal poverty level, under the demonstration.

In addition, the demonstration authorizes the:

- Children's Palliative Care Program: provides care coordination, respite care, expressive therapies, family training, and bereavement counseling, for children under the age of 21 years in populations 1, 2, and 3 who have been diagnosed with a life-limiting illness that is expected to be terminal before adulthood.

- Adult Hospice Program: allows for hospice services to be delivered concurrently with curative therapy to adults in populations 1, 2, and 3.

Lastly, as a Designated State Health Program, the demonstration allows:

- Marketplace Subsidies: The State offer subsidies for premiums for individuals with incomes at or below 300 percent of the federal poverty level who are purchasing health care coverage from a Qualified Health plan in Marketplace. The program is known as Vermont Premium Assistance (VPA) as part of the state-based health benefits exchange.

E. Substance Use Disorder Treatment

Since its inception, Vermont's demonstration has included payment flexibilities to support cost-effective alternatives to traditional Medicaid State Plan benefits. As part of its original 1115 demonstration for the Vermont Health Access Plan (VHAP) Medicaid Expansion, Vermont received a waiver of the IMD exclusion. This waiver, effective January 1, 1996, permitted Vermont to reimburse IMDs for individuals enrolled under the 1115 demonstration. The rationale behind this waiver was to permit the use of IMDs as alternatives to potentially more costly, general acute hospital services.

In 2004, CMS elected to no longer grant IMD waivers under its 1115 demonstration authority; states with existing IMD waivers (including Vermont) were given a schedule to phase out available Medicaid reimbursement. Under the phase-out terms Vermont was permitted to continue Medicaid reimbursement of IMD services through Calendar Year 2004; reimbursement was limited to 50% of allowable expenditures in Calendar Year 2005.

The Global Commitment to Health demonstration, approved in 2005, historically enabled Vermont to operate under a statewide, public managed care model. The Global Commitment demonstration provided the State with additional flexibility regarding health care service financing, including the purchase of healthcare services that are not traditionally covered by Medicaid. In the past Vermont used this authority to purchase alternative services, provided that:

- Are determined to be medically appropriate;
- Are delivered by a licensed (and not Medicare de-certified) healthcare provider; and
- Achieve program objectives related to cost, quality and/or access to care in the least restrictive, clinically appropriate setting possible.

Since 2005 Vermont has used its public managed care model authority under Global Commitment to purchase in-state residential SUD treatment in lieu of more costly hospital-based care. In 2017 the demonstration's operating model was modified to that of a non-risk Prepaid Inpatient Health Plan (PIHP). Vermont and CMS collaborated to continue the provision of these vital services.

In 2018, Vermont's was granted approval to amend the demonstration to include SUD IMD authority to sustain the continuum of treatment programs, including inpatient treatment, detoxification and residential treatment for SUD, in IMD settings, for Members whose needs align with the American Society of Addiction Medicine (ASAM) placement criteria and treatment guidelines.

In addition to the overall demonstration goals presented in Section I.(A) above, the goals for the continuation and enhancement of SUD programs in Vermont include:

1. Increased rates of identification initiation, and engagement in treatment;
2. Increase adherence to and retention in treatment;
3. Reductions in overdose deaths, particularly those due to opioids;
4. Reduced utilization of emergency department and inpatient hospital settings for treatment where the utilization is preventable or medically inappropriate through improved access to other continuum of care services;
5. Fewer readmissions to the same or higher level of care where the readmission is preventable or medically inappropriate; and
6. Improved access to care for physical health conditions among beneficiaries.

These SUD amendment goals align with overall goals of the overall GC demonstration as illustrated in Exhibit 1-2.

Exhibit 1-2: SUD Amendment Goal Alignment

Global Commitment to Health Goals	SUD Amendment Goals
To increase access to care	Increase rates of identification, initiation, and engagement in treatment(Goal #1)
	Improve access to care for physical health conditions among beneficiaries (Goal #6)
To improve the quality of care	Increase adherence to and retention in treatment (Goal #2)
	Reduce overdose deaths, particularly those due to opioids (Goals #3)
	Reduce utilization of emergency departments and inpatient hospital settings for treatment where the utilization is preventable or medically inappropriate through improved access to other continuum of care services (Goal #4)
To eliminate institutional bias	Reduce readmissions to the same or higher level of care where the readmission is preventable or medically inappropriate (Goal #5)

SUD residential treatment facilities that are considered IMD's as of November 2018 are described in Exhibit 1-3 below.

Exhibit 1-3: Type and Size of SUD IMD Facilities as of November 2018

Facility	Type and Target Group(s)	# of beds
Lund Home	Residential treatment for pregnant and parenting women w/children under 5 years old. Both mothers and children live on-site. Pregnant women may enroll in the program for the length of their pregnancy and through a post-partum period based on their individual needs	26
Valley Vista - Bradford	Residential treatment for women, men, and adolescents	80
Valley Vista - Vergennes	Residential treatment for women	19
Serenity House	Residential treatment adults	24
Brattleboro Retreat: SUD Program	Inpatient detoxification and treatment for adults	30

II. EVALUATION QUESTIONS, HYPOTHESES AND MEASURES

This evaluation will examine evidence that the demonstration supports its overarching goals: increased access to care; improved quality of care; cost containment; and stable in-home and community alternatives to institutional care. These overall demonstration goals extend to Vermont's SUD amendment effective July 1, 2018.

The plan utilizes both performance measurement results (providing more real-time data focused on whether a program is achieving measurable objectives) and more rigorous program evaluation findings that analyzes findings against national benchmarks, changes over time and attempts to isolate key variables influencing outcomes. Where appropriate measures will be examined for impact specific to SUD enrollees and other sub-groups.

To ensure that the new aspects of the demonstration and its 2018 SUD amendment are implemented as intended and achieve the related goals/objectives and desired outcomes, this evaluation plan includes strategic alignment with the State's Comprehensive Quality Strategy and SUD Monitoring Protocol.

A. Comprehensive Quality Strategy, Rapid Cycle Assessment and SUD Monitoring Protocol

Vermont has a Comprehensive Quality Strategy (CQS) that integrates all aspects of quality improvement programs, processes, and requirements across the State's Medicaid program. The CQS is intended to serve as a blueprint or road map for Vermont and its Medicaid managed care-like operations in assessing the quality of care that beneficiaries receive, as well as for setting forth measurable goals and targets for improvement.

As approved by CMS, the CQS is the vehicle for demonstrating Vermont's compliance with the new HCBS regulations (comparable to 'transition plans' in other states). The CQS meets all requirements of 42 CFR 438 and includes LTSS and HCBS quality components. Key elements addressed in the CQS include: goals; responsibilities; performance improvement projects; performance measures; populations; timelines; monitoring and evaluation; and performance improvement accountability.

The demonstration's evaluation will align with the goals, measures and monitoring activities outlined in the AHS CQS. AHS will regularly monitor the demonstration on the key outcome measures and performance targets and make changes as appropriate (obtaining CMS or legislative approval where needed). The CQS is reviewed and updated as needed, but no less than once every three years.

The State may also routinely evaluate policy changes and new initiatives to rapidly assess effectiveness, promote continuous improvement and to identify success and barriers without delay. The State will retain responsibility and discretion for conducting rapid cycle assessments for new payment and service delivery and/or payment reforms implemented or supported by the demonstration (e.g., Next Generation Medicaid ACO, Dental Incentives, Blueprint to Health) as well as any new Delivery System Reform Investments.

Documenting the development of new initiatives and their operational impact provides an understanding of the reasons for successful or unsuccessful performance, provides direction in shaping program modifications and improvement, and provides information about whether assessment findings can be generalized.

This rapid analysis will be based on grantee reporting, key informant information from the AHS, as well as community leaders, administrators, physician leaders, and others directly responsible for, or knowledgeable about, the new initiative or investment. As appropriate, fiscal analysis will be conducted to analyze expenditure information. Reports will be used to provide program staff with specific details for the month, quarter, or year, and/or provide direction in shaping modifications that may be required to support more effective investments.

This type of rapid cycle approach blurs some of the classic differentiation between formative and summative evaluation approaches. The selection of similar evaluation methods for different purposes will allow the State and providers to focus on adjusting the process aspects of an innovation – while at the same time improving the impact of the innovation overall. It is important to note that the rigor of the evaluation should not be sacrificed for the sake of speed. To do so, advanced statistical methods to measure effectiveness should be used, including the appropriate selection of comparison groups whenever possible.

The State has added an SUD Monitoring Protocol (SUD MP) and SUD mid-point assessment to its quality improvement activities. The SUD MP includes: monthly, quarterly and annual descriptive detail (e.g., number of enrollees and service delivered); annual outcome and quality metrics (e.g., HEDIS® measures); and milestone specific process measures (e.g., use of IT strategies to improve SUD services).

The SUD MP identifies a baseline, a target to be achieved by the end of the demonstration and an annual goal for closing the gap between baseline and target expressed as percentage points. Key elements addressed in the SUD MP will also be used in the design of this evaluation. In addition, the revised design will include a mid-point assessment of progress specific to the effectiveness of the 2018 SUD demonstration amendment.

This alignment of performance oversight will create a feedback loop across quality activities, mid-term SUD, quarterly assessment reports, rapid cycle projects and summative evaluation findings. The State's process of regularly measuring, monitoring, and making changes should result in continuous improvement in terms of achieving its performance targets and intended outcomes.

B. Driver Diagrams

The Global Commitment to Health has been in operation for over 13 years. It offers a comprehensive statewide demonstration designed to use public health and managed care techniques for the design and delivery of behavioral and physical health services; and through its investments, address social determinants of health. The demonstration also equalizes the entitlement for long term care services in the home and community for Medicaid enrollees with developmental and other disabilities and elders.

Over the past 13 years the State has successfully improved access, supported quality and community integration and contained costs. Tools and techniques from managed care, such as alternatives to fee for service and enhanced care coordination payment models (e.g., Blueprint for Health), value-based contracting (e.g., VMNG ACO), and comprehensive quality monitoring. Public Health approaches include promoting health education and awareness, improving access to primary and preventative care (e.g., immunization clinics, expanded health coverage) and addressing social determinants of health. In achieving its outcomes, the demonstration offers multiple interrelated drivers of success. Driver diagrams in support of demonstration goals are provided in Figures 1-4.

Figure 1: Access to Care Driver Diagram

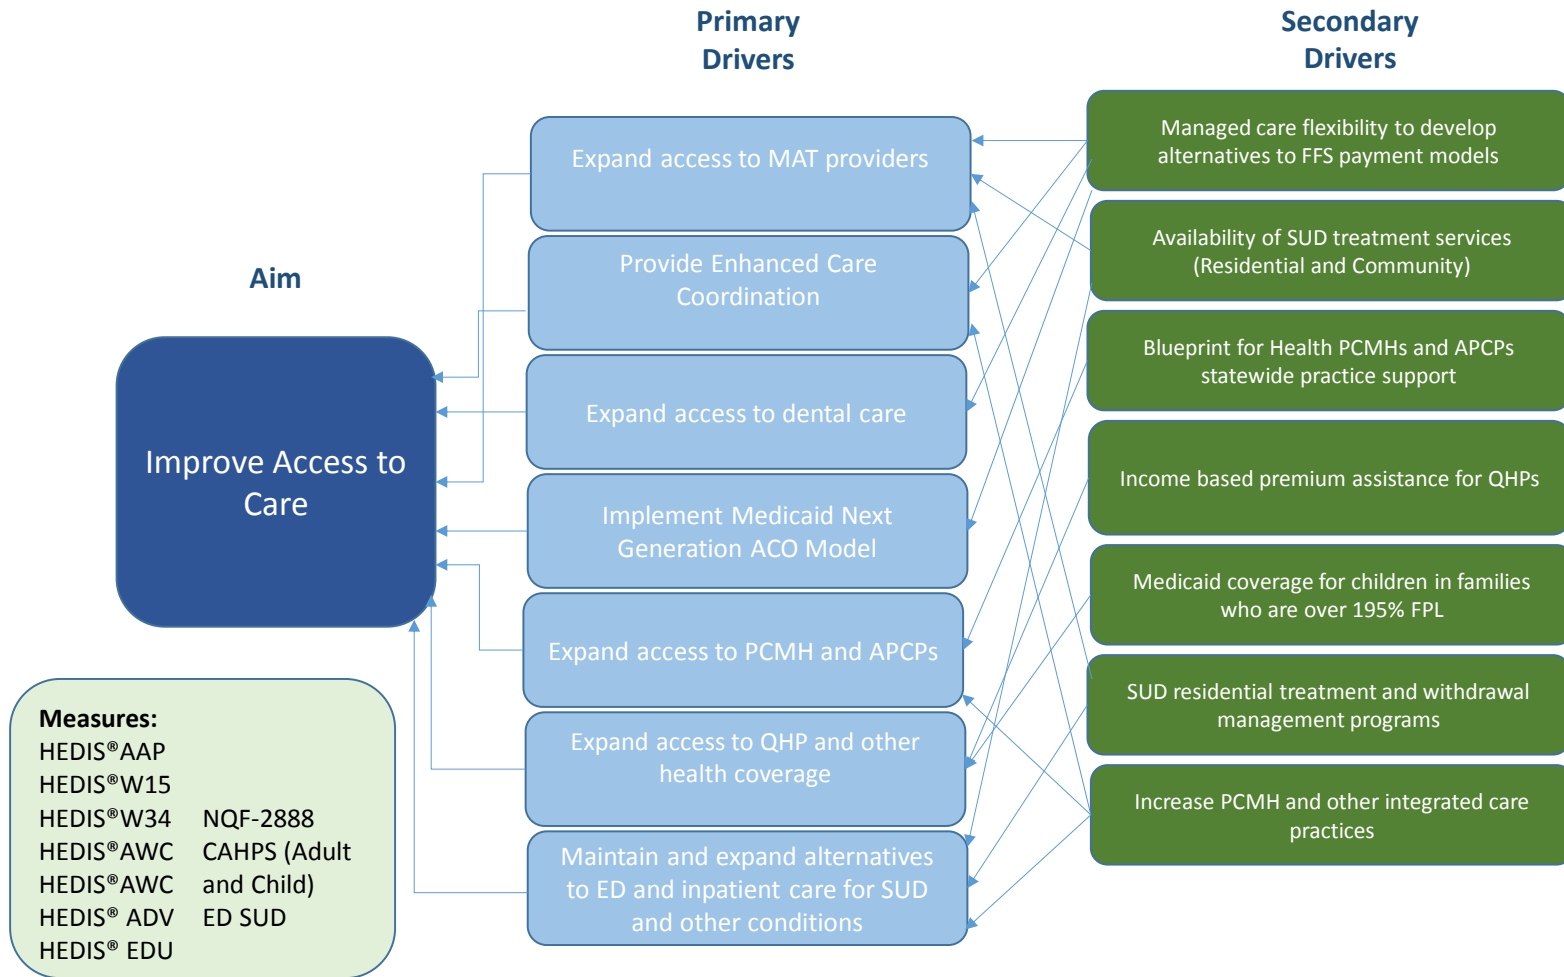

Figure 2: Quality of Care Driver Diagram

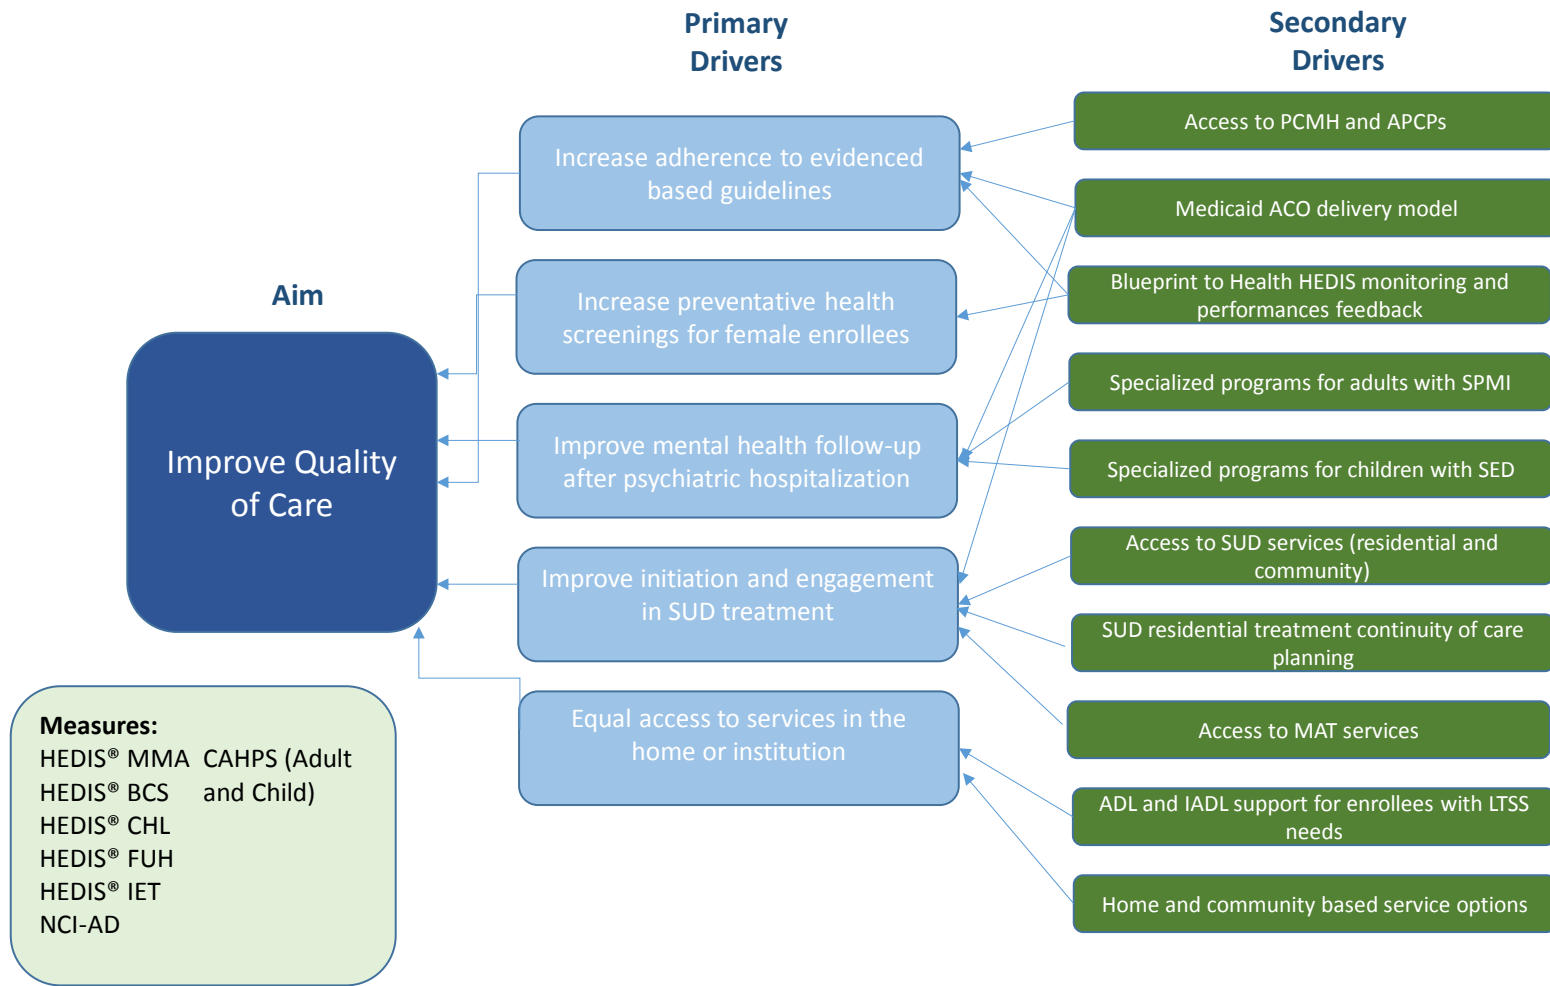

Figure 3: Community Integration Driver Diagram

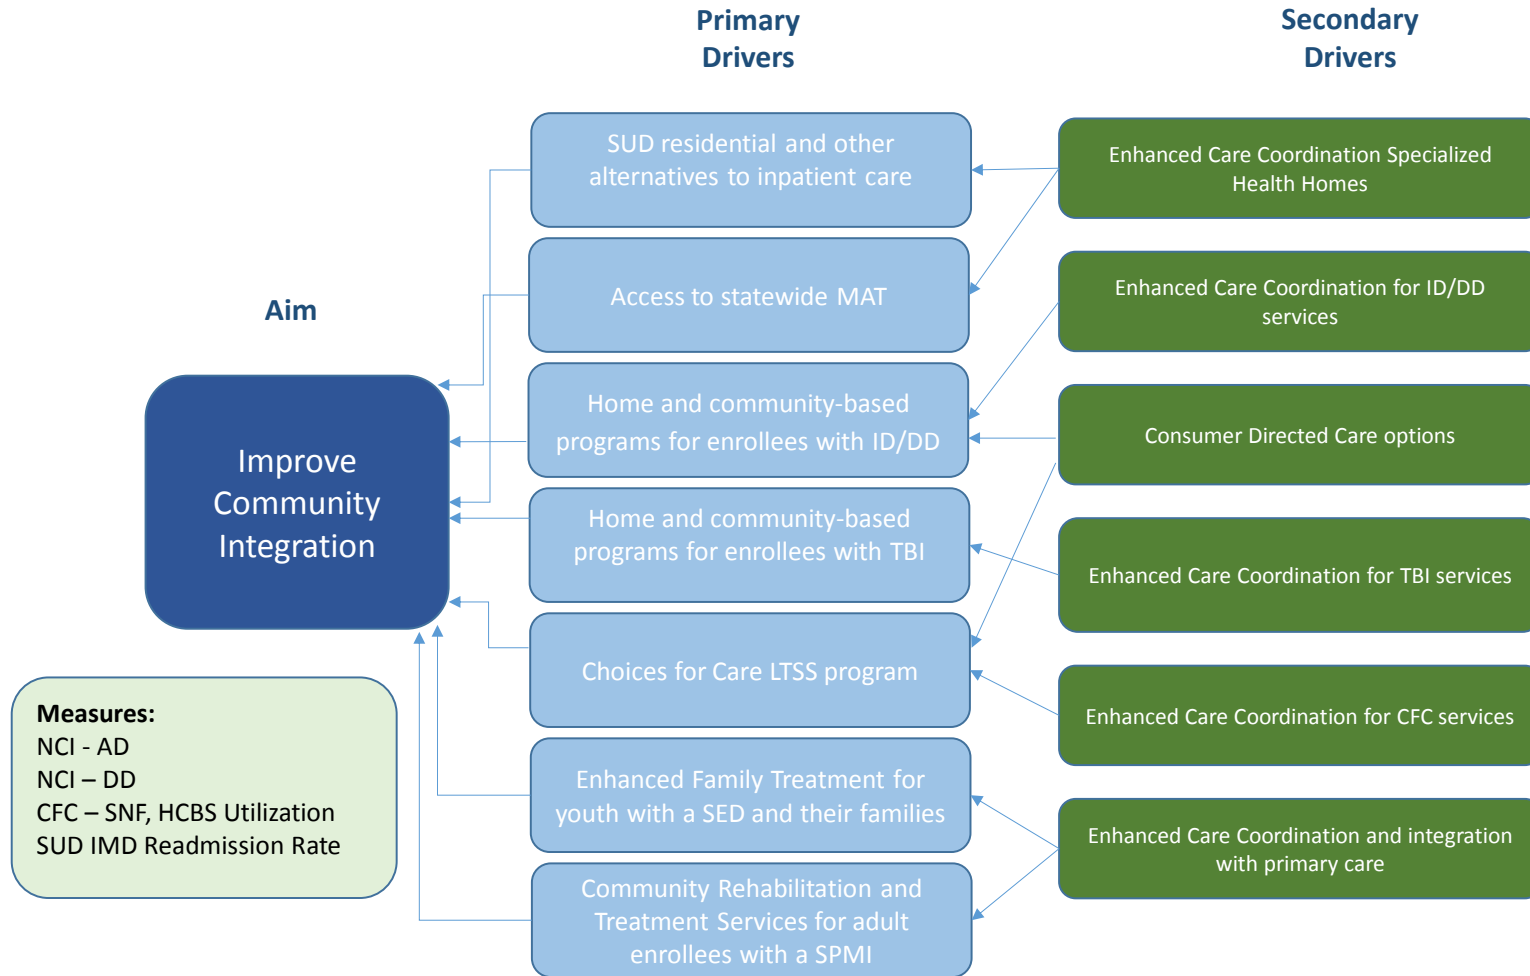

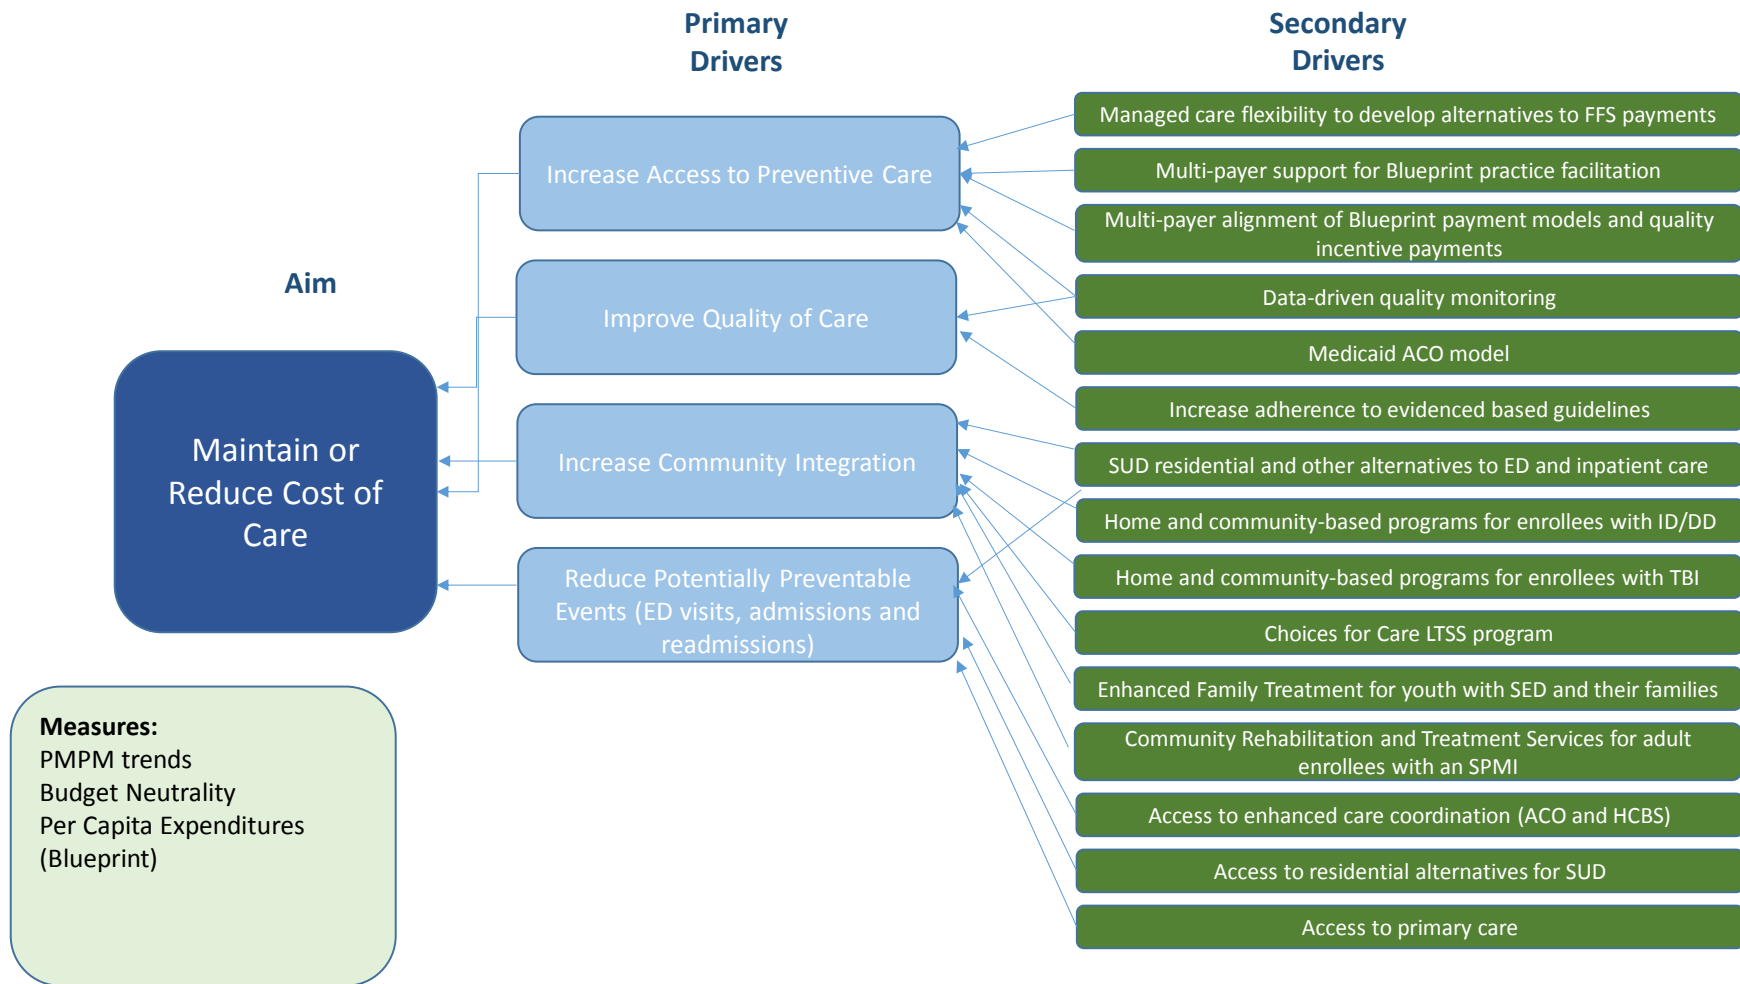

Figure 4: Maintain or Reduce Cost Driver Diagram

C. Hypothesis

The State has identified the following overarching hypotheses for the demonstration.

- The demonstration will result in improved access to care;
- The demonstration will result in improved quality of care;
- Value-based payment models will improve access to care;
- Improved access to preventive care will result in lower overall costs for the healthcare delivery system;
- Improved access to primary care will result in improved health outcomes;
- Enhanced care coordination will improve timely access to needed care;
- The demonstration will result in increased community integration;
- The demonstration will maintain or reduce spending in comparison to what would have been spent absent the demonstration;

An overview of each hypothesis, its associated research questions and study population is provided in Exhibit 2-1.

Exhibit 2-1: Amended Evaluation Research Questions and Hypotheses by Study Population

Amended Evaluation Research Questions and Hypotheses		
Research Question	Hypothesis	Study Population
<i>Will the demonstration result in improved access to care?</i>	<ul style="list-style-type: none"> ● The demonstration will result in improved access to community based medical, Medication Assisted Treatment for Opioid Use Disorder (OUD) and dental care. ● The demonstration will reduce the percent of potentially avoidable ED visits. ● The demonstration will reduce ED use for SUD per 1,000 SUD enrollees ● Premium requirements for eligible families above 195% FPL will not impede access to enrollment. ● The VPA Qualified Health Plan subsidy program will result in continued access to health care coverage. 	<ul style="list-style-type: none"> ● Total Medicaid ● Specialized Program Enrollees (CFC, CRT, DDS, TBI, SED) ● Children’s Premium Population ● VT Premium Assistance (VPA) recipients ● SUD Service Recipients
<i>Will the demonstration result in improved quality of care?</i>	<ul style="list-style-type: none"> ● The demonstration will improve: <ul style="list-style-type: none"> ○ Asthma care; ○ Preventative health screenings for female enrollees; ○ Mental health follow-up after psychiatric hospitalization; and ○ Initiation and engagement in SUD treatment. ● The demonstration will improve enrollee experience of care and rating of the health plan. 	<ul style="list-style-type: none"> ● Total Medicaid ● Specialized Program Enrollees (CFC, CRT, DDS, TBI) ● Blueprint Enrollees ● SUD Service Recipients
<i>Will value-based payment models increase access to care?</i>	<ul style="list-style-type: none"> ● The Medicaid ACO will show a lower overall cost of care. ● The Medicaid ACO will improve access to mental health care and SUD treatment. 	<ul style="list-style-type: none"> ● ACO Attributed Enrollees

Amended Evaluation Research Questions and Hypotheses		
Research Question	Hypothesis	Study Population
	<ul style="list-style-type: none"> ACO enrollees will receive developmental screenings in the first 3 years of life. ACO enrollees will show improved diabetes and hypertension outcomes. 	
<i>Will improved access to preventive care result in lower overall costs for the healthcare delivery system?</i>	<ul style="list-style-type: none"> The Blueprint for Health initiative will reduce per capita expenditures for enrollees whose diabetes is in control. The Blueprint for Health initiative will contain or reduce total per capita expenditures for enrollees ages 1-64 years. 	<ul style="list-style-type: none"> Total Medicaid Blueprint Enrollees
<i>Will improved access to primary care result in improved health outcomes?</i>	<ul style="list-style-type: none"> The Blueprint for Health will improve diabetes control for members age 18-75. 	<ul style="list-style-type: none"> Blueprint Enrollees
<i>Will enhanced care coordination improve timely access to needed care?</i>	<ul style="list-style-type: none"> Blueprint for Health enrollees will report timely access and satisfaction with their experience of care. 	<ul style="list-style-type: none"> Blueprint Enrollees
<i>Will the demonstration will result in increased community integration?</i>	<ul style="list-style-type: none"> The demonstration will increase community living and integration for persons needing LTSS. The demonstration will increase choice and autonomy for persons needing LTSS. The demonstration will increase integrated employment options for persons needing LTSS. SUD IMD service recipients maintain community living as evidenced by low rates of SUD IMD readmission. 	<ul style="list-style-type: none"> Specialized Program Enrollees (CFC, CRT, DDS, TBI) SUD Service Recipients
<i>Will the demonstration maintain or reduce spending in comparison to what would have been spent absent the demonstration?</i>	<ul style="list-style-type: none"> The demonstration will contain or reduce overall Medicaid spending. The demonstration will contain or reduce SUD IMD spending. 	<ul style="list-style-type: none"> Total Medicaid SUD IMD Service Recipients

In addition, AHS will undertake a formative evaluation of its one-time delivery system reform investments to support Accountable Care Organizations (ACO) and Medicaid community providers in delivery system reforms. Specifically, the State expects to encourage ACO-based provider led reform that features (a) collaboration between providers, (b) reimbursement models that move away from Fee-For-Service payment, and (c) rigorous quality measurement that aligns with the APM quality framework. In late November of 2017 two new investments were approved by CMS in the ACO delivery system reform category. These investments and their expected outcomes are outlined in Exhibit 2-2.

Exhibit 2-2: 2018 Delivery System Reform Investments

ACO Delivery System Reform Investments	
Investment Initiative	Expected Outcome
<p>OneCare Vermont ACO Quality Health Management Measurement Improvement investment. This project is designed to assist the ACO in providing technical assistance to network providers in setting quality improvement targets and using a suite of new and enhanced information dissemination tools and reports</p>	<ul style="list-style-type: none"> OneCare’s analytics platform will be enhanced to meet the needs of OneCare’s multi-payer risk bearing ACO participants and the State’s All Payer ACO model.
	<ul style="list-style-type: none"> Care Navigator functionality will be improved to address the needs of care coordinators and patients with complex care coordination needs.
	<ul style="list-style-type: none"> OneCare’s information dissemination tools to support population health care coordination, and financial performance initiatives will show increased adoption and demonstrate value to OneCare providers.
<p>OneCare Vermont ACO Advanced Community Care Coordination investment. This project is designed to support integrated care delivery system that is person-centered, efficient and equitable through the implementation of a community-based care coordination model.</p>	<ul style="list-style-type: none"> OneCare will support the development of a standardized team-based care model that integrates PCMHs with the continuum of care provider network.
	<ul style="list-style-type: none"> OneCare’s care coordination model for complex needs populations will expand to additional communities served in 2018 with several core components in place, bringing stability, scalability, and consistency to the care model.
	<ul style="list-style-type: none"> OneCare’s expanded investments in team-based care coordination will provide the resource necessary to build upon and strengthen existing partnerships between PCMHs and community-based providers; thus, enabling more individuals with complex needs to have access to care coordination services.
	<ul style="list-style-type: none"> OneCare will have an actionable framework and sustainable care coordination payment model and corresponding outcome (savings) model to effectively evaluate the long-term return on investment.

D. Data Collection and Assurances

Vermont’s public managed care-like model is managed by AHS through delegation to DVHA. Encounter, claims and cost data are available through the MMIS and will be made available to evaluators as needed for purpose of evaluation. Existing agreements require that all IGA partners, ACOs and SUD programs included under the demonstration make data available to support evaluations and performance monitoring efforts. AHS does not anticipate problems with data collection and reporting.

AHS will use a variety of sources and methods to test the above hypotheses, including beneficiary surveys and provider claims data. AHS staff and independent evaluators will also analyze data from third-party sources, such as the U.S. Census Bureau and, if available through the All-Payer Model, Medicare claims data. Vermont data sources used to evaluate performance against demonstration goals will include:

Exhibit 2-3: Global Commitment to Health Data Sources

Global Commitment to Health Evaluation Data Sources		
Data Lead	Data Source	Brief Description
DAIL	Social Assistance Management System (SAMS)	Encounter data submitted to the State by providers used to identify residential settings used by enrollees in the Choices for Care program
	National Core Indicators Project (NCI)	Point in time survey data collected on LTSS and HCBS program participants used to assess community integration, choice and control for enrollees in Choices for Care, Developmental Disabilities and Traumatic Brain Injury programs
DMH	Monthly Service Reports (MSR)	Encounter data submitted to the State by providers used to identify consumers receiving specialized mental health services and to support the development of employment statistics for persons with a SPMI
DOL	Employment database	Wage and employment information submitted by employers to the State Department of Labor used to support the development of employment statistics for specialized populations
DVHA	Medicaid Management Information System (MMIS)	Claims data submitted to the State by providers used to support HEDIS® and HEDIS®-like performance, Medication Assisted Treatment, service utilization and cost metrics for all enrollees
	State Medicaid Eligibility and Enrollment files, including VT Health Connect Premium Assistance (VPA) files	Eligibility and enrollment detail for Medicaid beneficiaries used to determine enrollee aid category and stratify data into sub-groups, when applicable, including measures of health coverage for persons who received marketplace subsidies to purchase a QHP
	Consumer Assessment of Healthcare Providers and Systems (CAHPS)	Point in time survey data collected on Medicaid beneficiaries used to assess enrollee experience of care
VDH	Vital Statistics System	Public health birth, death and other vital records used to track overdose deaths attributed to Vermont residents
	Substance Abuse Treatment Information System (SATIS)	Provider, enrollee and encounter data used to assess rates of Medication Assisted Treatment and successful completion of residential treatment
	Household Health Insurance Survey	Point in time survey data collected on Vermonters used to determine rates of uninsured Vermonters
GMCB	Vermont Health Care Uniform Reporting and Evaluation System (VHCURES)	Claims data submitted by all health plans in the State of Vermont used to assess outcomes for Blueprint to Health enrollees
ACO	Provider Encounter Data and Outcome Reports	Provider medical record and HEDIS® outcomes reported to the State and used to assess outcomes for ACO attributed enrollees

To limit administrative burden on providers, consumers, and staff and to eliminate duplicative evaluation efforts, the demonstration evaluation will coordinate and compile existing measures aimed at studying the impact of various health care initiatives under the demonstration. These include the:

- Global Commitment to Health Comprehensive Quality Strategy, including HEDIS® metrics;
- Global Commitment to Health SUD Monitoring Plan, including HEDIS® metrics;
- AHS Results Based Accountability Scorecards;

- National Core Indicators Project, (Developmental Disability and Aging and Other Disability Program Surveys) for Choices for Care, Developmental Disabilities and Traumatic Brain Injury program enrollees;
- Medicaid Quality Measures for enrollees attributed to an ACO; and
- Blueprint for Health Multi-Payer Delivery Reform Initiative for enrollees attributed to a Patient Centered Medical Home (PCMH) or Advanced Primary Care Practice.

E. Performance Measures, Data Source, Frequency and Sampling Methods

This evaluation incorporates the use of performance measures based on the following criteria: 1) evidenced based; 2) potential for improvement; 3) prevalence or incidence; 4) substantial impact on health status and/or health outcomes; 5) alignment with national measures; and 6) to the extent possible, adaptable measures across various practice settings.

The demonstration uses HEDIS® and AHS Results Based Accountability Scorecards for most of the targeted performance measures. Additionally, the evaluation will align measures and priorities with those collected as part of the All-Payer Model Medicare demonstration Agreement Appendix 1 [Found Here](#) on page 36, which includes alignment with the development of the Global Commitment to Health Medicaid ACO.

Using these measures, AHS will determine whether efforts to improve access (e.g., primary care visits, ED visits, and providers accepting Medicaid), enhance quality (e.g., follow-up after hospitalization, medication management for those with asthma, and patient experience of care), contain costs (e.g., budget neutrality, and SUD IMD) and improve community integration were achieved. Performance measures specific to specialized programs and in-home and community services will also be included, such as ability of participants to live longer in their communities and experience an improved quality of life, choice and control.

Reported HEDIS rates will be benchmarked to NCQA Medicaid HEDIS means and percentiles as appropriate. Current performance targets and national benchmarks are identified in the States Comprehensive Quality Strategy [Found Here](#) and SUD Monitoring Protocol [Found Here](#)

One other important source of information to initiate and guide improvement efforts is the beneficiary. The most widely used instrument for collecting reports and ratings of health care services from the beneficiary's perspective is the CAHPS. CAHPS survey data allows entities to: 1) analyze performance compared to benchmarks; 2) identify changes or trends in performance; and/or 3) consider other indicators of performance. Vermont will combine CAHPS data with information collected through periodic surveys of targeted groups of demonstration enrollees.

Three hypotheses (listed below) will be measured through evaluation efforts associated with the Blueprint for Health Multi-Payer Advance Primary Care Practice initiative:

- Improved access to primary care will result in positive health outcomes;
- Enhanced care coordination will promote timely access to needed care; and
- Improved access to primary care will result in overall lower cost for the healthcare delivery system.

The Blueprint for Health is a state-led, multi-payer program dedicated to achieving well-coordinated and seamless health services, with an emphasis on prevention and wellness. As such, the Blueprint employs several different approaches to incentivizing delivery system reform and increased quality and performance through payment reform. The foundation of the Blueprint model is a Multi-Payer Advanced Primary Care Practice (MAPCP) program. Participation is optional for providers, but mandatory for Vermont's commercial payers (with the exception of self-insured plans) and Medicaid.

Current participating payers in the Blueprint for Health include Medicaid, Medicare, Blue Cross Blue Shield of Vermont, MPV and CIGNA. As such, some measures reflect population health outcomes across payers and are not specifically stratified for Medicaid enrollees. As feasible within available resources, Blueprint performance and evaluation findings may include sub-analysis relative to Medicaid only participants.

Demonstration objectives and annual evaluation measures for each research question are presented in Exhibits 2-4 -2-9. These exhibits also address data collection methods for each measure, alignment with other State or National measures, sampling methodology, source of data, and baseline years for each measure.

Exhibit 2-4: Access to Care

Research Question: Will the demonstration Result in Improved Access to Care?						
<i>Performance Area</i>	<i>Metric</i>	<i>Sampling Methodology</i>	<i>Source of Data</i>	<i>Nat'l Benchmark</i>	<i>Data Collection</i>	<i>Baseline Year</i>
Ambulatory Care	Percent of adult enrollees who had an ambulatory or preventive care visit (Total)	Total Medicaid	MMIS	HEDIS®AAP	CY	2016
Well-Child Visits	Well-child visits first 15 months of life, 6 or more visits	Total Medicaid	MMIS	HEDIS®W15	CY	2016
	Well-child visits 3rd, 4th, 5th, & 6th year of life	Total Medicaid	MMIS	HEDIS®W34	CY	2016
Adolescent Well- Care Visits	Percent of adolescents ages 12 to 21 who receive one or more well-care visits with a PCP during the measurement year	Total Medicaid	MMIS	HEDIS®AWC	CY	2016
		ACO Members	MMIS	HEDIS®AWC	CY	2017
Access to Dental Care	Children age 2-20 years with at least one dental visit (Total)	Total Medicaid	MMIS	HEDIS® ADV	CY	2016
Emergency Department Visits	Rate of ED visits per 1,000-member months	Total Medicaid	MMIS	HEDIS® EDU	CY	2016
		Total Medicaid, including dual eligible members	MMIS	N/A	CY	2016
		DDS Program Enrollees	MMIS	N/A	CY	2016
		CFC Program Enrollees	MMIS	N/A	CY	2016
		TBI Program Enrollees	MMIS	N/A	CY	2016
		CRT Program Enrollees	MMIS	N/A	CY	2016
		SED Program Enrollees	MMIS	N/A	CY	2016
	Percent of Potentially Avoidable ED Utilization ED use for SUD per 1,000 SUD enrollees	Total Medicaid	MMIS	N/A	CY	2016
SUD Enrollees	MMIS	N/A	CY	2018		
Inpatient Admissions	All cause unplanned admissions for patients with multiple chronic conditions	ACO Members	MMIS	NQF-2888	CY	2017
Effect of Children's Premiums	Percent of children found eligible for Dr. Dynasaur with premium whose families paid the premium necessary to effectuate coverage	Total Premium Population	Eligibility Records	N/A	CY	2016
Impact of VPA Program	Percent of members with VPA who had coverage from the month they signed up through the end of the year, without any gaps in coverage or VPA	Total VPA Enrollees	VPA Data	N/A	CY	2016
Getting Needed Care	Percent of survey respondents indicating they received necessary care	Representative Sample Medicaid	CAHPS Adult	CAHPS-CPA	CY	2017
			CAHPS Child	CAHPS-CPC	CY	2016
Health Coverage	Percent of uninsured Vermonters	Total Vermont	Vermont Household Insurance Survey	N/A	Every 3 rd Calendar Year	2014
Medication Assisted Treatment (MAT) for Opioid Addiction	Number of people receiving MAT per 10,000 Vermonters age 18-64	Total Vermont	MMIS; SATIS	N/A	CY	2016
Drug Overdose Deaths	Vermont resident deaths related to drug overdose	Total Vermont	Vital Statistics	N/A	CY	2016

Exhibit 2-5: Quality of Care

Research Question: Will the demonstration Result in Improved Quality of Care?						
<i>Performance Area</i>	<i>Metric</i>	<i>Sampling Methodology</i>	<i>Source of Data</i>	<i>Nat'l Benchmark</i>	<i>Data Collection</i>	<i>Baseline Year</i>
Medication Management for People with Asthma	Percent of enrollees receiving appropriate asthma medication management 50% Compliance (Total)	Total Medicaid	MMIS	HEDIS® MMA	CY	2016
	Percent of enrollees receiving appropriate asthma medication management 75% Compliance (Total)	Total Medicaid	MMIS	HEDIS®MMA	CY	2016
Breast Cancer Screening	Percent of female enrollees age 50 to 74 who receive screening at appropriate intervals	Total Medicaid	MMIS	HEDIS® BCS	CY	2016
Chlamydia Screening	Percent of female enrollees screened (Total)	Total Medicaid	MMIS	HEDIS® CHL	CY	2016
Follow up after Hospitalization for Mental Illness	Percent of enrollees discharged who had follow-up at 7 days	Total Medicaid	MMIS; MSR	HEDIS® FUH	CY	2016
		ACO Members	MMIS	HEDIS® FUH	CY	2017
	Percent of enrollees discharged who had follow-up at 30 days	Total Medicaid	MMIS; MSR	HEDIS® FUH	CY	2016
		ACO Members	MMIS	HEDIS® FUH	CY	2017
Substance Use Disorder Treatment	Percent of enrollees using substances who initiate in treatment (Total)	Total Medicaid	MMIS	HEDIS® IET ²	CY	2016
		ACO Members	MMIS	HEDIS® IET	CY	2017
	Percent of enrollees using substances who engage in treatment (Total)	Total Medicaid	MMIS	HEDIS® IET ³	CY	2016
		ACO Members	MMIS	HEDIS® IET	CY	2017
Health Wellness	The proportion of people who describe their overall health as poor	CFC Representative Sample	NCI-AD	NCI-AD	Point-In-Time	2018
		TBI Representative Sample	NCI-AD	NCI-AD	Point-In-Time	2018
	The proportion of people who were reported to be in poor health	DDS Representative Sample	NCI-DD	NCI-DD	Point-In-Time	2016
Health Plan	Overall rating of health plan	Representative Sample Medicaid	CAHPS Adult	CAHPS-CPA	CY	2017
			CAHPS Child	CAHPS-CPC	CY	2016
Quick Care	Enrollee rating of ability to get care quickly	Representative Sample Medicaid	CAHPS Adult	CAHPS-CPA	CY	2017
			CAHPS Child	CAHPS-CPC	CY	2016
Overall Rating of Care	Enrollee rating of care received	Representative Sample Medicaid	CAHPS Adult	CAHPS-CPA	CY	2017
			CAHPS Child	CAHPS-CPC	CY	2016

² Vermont's IET measure is aligned with NCQA NQF measure 0004, however, it has been modified to incorporate billing practices unique to Vermont's Specialized Health Home model.

III. EVALUATION DESIGN AND METHODS

In updating its existing Medicaid demonstration evaluation strategy as reflected in this document, the State has refined overarching demonstration hypotheses and identified study populations and levels of stratification for specialized programs, including SUD programs. The design identifies data sources, reviews general methods, data analytics and defines annual reporting requirements for the term of the demonstration. However, final techniques, technical specifications and study groups will be determined following a review of available data for integrity and completeness by the evaluator.

A. DESIGN

The evaluation will rely on quasi-experimental design to measure change over time and differential statistics to describe the population and findings. Results will be compared to statewide or national benchmarks, as applicable; and be assessed relative to a baseline to test the associated hypotheses. Evaluators may employ secondary analysis to reexamine existing data to address demonstration hypothesis or isolate Medicaid enrollees from the general population.

Both qualitative and quantitative methods will be used to address the hypotheses and research questions. Qualitative methods will be used to better understand new delivery system reforms supported with demonstration investment funds, and will include the use of interviews, and inductive analysis to discover patterns, themes, and interrelationships. Qualitative methods will also be explored for the SUD Mid-Point Assessment, in conjunction with quantitative performance analysis.

Quantitative methods will be used to better understand the impact of demonstration implementation (i.e., the relationship that demonstration participation has on: access to care; quality of care; cost containment; and stable in-home and community alternatives to institutional care) and will include the use of descriptive/inferential statistics, and deductive analysis to generate relationships between variables that can be generalized to the broader Medicaid population.

Final determination of methods and analytics will be made following the review of sample size and available data points over the life of the demonstration.

When feasible, Pre/Post and Interrupted Time Series designs are proposed for various aspects of the demonstration. Difference in Differences methods will be used to characterize differences between groups when data exists before and after intervention for a group of individuals similar to participants (treatment group) that will not be receiving services/benefits (comparison group).

It is anticipated that Accountable Care Organization (ACO) and Blueprint (BP) practice attribution will allow measurement in at least one time period before ACO or BP practice intervention and at least one time period after ACO or BP practice intervention. Appropriate measures associated with value based payments, primary care, and enhanced care coordination outlined in this document will be assessed relative to internal comparison groups when available.

When employed, the length of any pre/post study periods is expected to be a minimum of 12 months. If necessary, to examine change over time, evaluators may employ an extended pre-period for those measures that have been in place longer than 12-months.

It is anticipated that time series methods will be used for measures associated with aggregate demonstration and specialty program populations (including SUD IMD and those impacted by premium

payments and subsidies). When using these methods, the evaluator is expected to consider and address various issues that might compromise the results. If necessary, alternative methods might be required.

Delivery System Reform Investments

AHS will conduct an internal assessment of Vermont's ACO delivery system reform investments, implemented in 2018. The assessment will be based on grantee reporting, key informant information from AHS program staff, as well as community leaders, administrators, physician leaders, and others directly responsible for, or knowledgeable about, the new initiative or investment. As appropriate, fiscal analysis will be conducted to analyze expenditure information. Reports will be used to provide program staff and provide direction in shaping modifications that may be required to support more effective investments. Findings from the AHS assessment of these onetime awards will be included in state's second Interim Evaluation Report due December 31, 2020.

SUD Mid-Point Assessment

The GC Evaluation will include a mid-point assessment of the SUD amendment submitted to CMS by December 31, 2020. The evaluator will collaborate with key stakeholders, including representatives of AHS, SUD treatment providers, beneficiaries, and other key partners in the design, planning and conducting of the mid-point assessment. The assessment will include an examination of progress toward meeting each milestone and timeframe approved in the SUD Implementation Protocol, and toward closing the gap between baseline and target each year in performance measures as approved in the SUD MP. The assessment will also include a determination of factors that affected achievement on the milestones and performance measure gap closure percentage points to date, and a determination of selected factors likely to affect future performance in meeting milestones and targets not yet met and about the risk of possibly missing those milestones and performance targets. The mid-point assessment will also provide a status update of budget neutrality requirements. For each milestone or measure target at medium to high risk of not being met, the evaluator will provide, for consideration by the state, recommendations for adjustments in the state's implementation plan or to pertinent factors that the state can influence that will support improvement. The evaluator will provide a report to the state that includes the methodologies used for examining progress and assessing risk, the limitations of the methodologies, its determinations and any recommendations.

Evaluation Period and Reporting

The Global Commitment demonstration is an all-inclusive program designed to align efforts in primary care, behavioral health and LTSS. The most recent demonstration extension was designed to align Medicaid's Next Generation ACO model with Vermont's All Payer Model Medicare demonstration. In July 1, 2018 the extension was amended to continue SUD residential services delivered in IMD settings. To capture changes overtime, the evaluation design includes several baseline measurement periods including: an overall baseline period of 2016 for most population measures; a 2017 baseline for ACO attributed Medicaid enrollees; a 2018 baseline for LTSS NCI measures of integration, choice and control for Choices for Care enrollees and Medicaid enrollees who have a TBI; and a 2018 baseline for certain measures of SUD program change. The resulting evaluation includes multiple study periods across calendar years 2016-2021, with an extensive IMD study previously conducted for years 2012-2017, submitted to CMS on April 1, 2018. The evaluation period is depicted in Exhibit 3-1.

Exhibit 3-1 Evaluation Study and Reporting Period

Evaluation Study Period 2016 -2021							
	Year 1	Year 2	Year 3	Year 4	Year 5		
	CY2016	CY2017	CY2018	CY2019	CY2020	CY2021	CY2022
Extension Baseline	ACO Baseline	NCI-AD Baseline (LTSS) SUD Baseline					
		Interim Findings and IMD Report April 1 2018	SUD Amendment July 1, 2018		Interim Report SUD Mid-Point Assessment		Final Report

In addition to the four evaluation report deliverables listed below, the State will compile data and summarize demonstration performance to-date for CMS in quarterly and annual reports and SUD Monitoring report. An independent evaluator will support all demonstration evaluation reporting requirements.

- Interim Evaluation Report and IMD Study (Draft April 1, 2018, final due 60-days post CMS feedback)
- Interim Evaluation Report (Draft December 31, 2020, final due 60-days post CMS feedback)
- SUD Mid-Point Assessment (December 31, 2020)
- Summative Evaluation Report (Draft within 18 months of the end of the approval period, December 21, 2021, final due 60-days post CMS feedback)

The independent evaluator will support the State of Vermont, as needed, in its efforts to complete rapid cycle assessments for new payment and service delivery reform models including but not limited to ACO model enhancements, efforts to support integration across providers and new delivery system investments.

B. TARGET AND COMPARISON POPULATION

In Vermont’s demonstration, Medicaid eligibility is synonymous with enrollment in the public managed care-like model making general comparison and/or control groups difficult. However, two health care initiatives were identified where data for Medicaid comparison groups may be available over time, the Blueprint for Health and the Vermont Medicaid Next Generation ACO. Whenever possible matched samples for participants in these reforms and those not receiving programs services will be used to explore differences.

The evaluation will study the impact of the demonstration on all enrollees e.g., total Medicaid population (enrollees participating in specialized programs (e.g., ID/DD, CFC, CRT, TBI, ACO Attributed), enrollees participating in non-specialized programs) as well as provide stratification for various hypothesis and key measures by specialized programs and for enrollees with SUD treatment needs. Please see Exhibits 2-4 through 2-9 for proposed stratification and levels of analysis by specialized program and measure.

Synthetic control techniques⁴ will be considered if suitable comparison states and/or data exists. When feasible given sample size, sub-sets of program participants may be compared to statewide or national

⁴ Abadie Alberto, Alexis Diamond and Jens Hainmueller” Synthetic Control Methods for Comparative Case Studies: Estimating the Effect of California’s Tobacco Control Program” Journal of American Statistical Association Vol. 105, No. 490, 2010 pp. 493-505.

benchmarks. Additionally, the State will work with its evaluation contractor to determine if neighboring New England or other states may be comparable in size, provider network and reform initiatives.

C. Data Analysis

The evaluation data analysis will consist of both exploratory and descriptive strategies and incorporate univariate, bi-variate, and multi-variate techniques. Analysis will be performed to systematically apply statistical and/or logical techniques to describe, summarize, and compare data within the state and across time, and to prepare data, wherever possible in a manner that permits comparison to results from other states applying the same methodology (e.g., HEDIS reports).

Descriptive statistics will be used to describe the basic features of the data and what they depict, and to provide simple summaries about the sample and the measures. Together with simple graphics analysis, the descriptive statistics form the basis of quantitative analysis of data. They are also used to provide simple summaries about the participants and their outcomes. An exploratory data analysis is used to compare many variables in the search for organized patterns. Data will be analyzed as rates, proportions, frequencies, measures of central tendency (e.g., mean, median, mode), and/or qualitatively analyzed for themes.

As appropriate analysis methods such as: McNemar's chi-square, Mann-Whitney U Test, and Wilcoxon Signed Rank Test will be considered. These nonparametric tests are appropriate when data are (1) categorical or (2) continuous but do not meet the assumptions (e.g., normality) used by parametric tests. Parametric analyses (e.g., t-tests, etc.) may be used as appropriate. The Independent Evaluator will test whether continuous measures (e.g., number of ED visits, etc.) meet the assumptions of parametric analyses. If these measures do not meet the assumptions of parametric tests, non-parametric methods (e.g., Mann-Whitney U) will be used to analyze the data. The non-parametric tests will be used to assess whether any differences found between the pre- and post-test periods are statistically significant (i.e., unlikely to have occurred in the data through random chance alone). The traditionally accepted risk of error ($p \leq 0.05$) will be used for all comparisons.

A pre-post design will be used to examine the statewide impact of the Demonstration on evaluation measures. Outcomes will be calculated annually for each of the five demonstration years and a baseline period. Regression models accounting for members in more than one year (clustering) will be used to assess the rate of change over time in study outcomes for the study group. To assess change over time, the evaluation will use Poisson or negative binomial regression models for the utilization measures, generalized linear models for the cost measures, and logistic regression for the quality measures. Age and gender will be controlled for in the models examining cost and utilization measures. Statistically significant results will be reported based on $p \leq 0.05$. The specific method used will be determined by the evaluator after reviewing the available claims and encounter data.

Adjustments for Alternative Payment Models

Vermont has been engaged in health care and payment reform since the inception of the demonstration in 2005. In many cases, specialized programs no longer employ fee-for-service claiming and encounter data may be stored in multiple Medicaid legacy systems across AHS. In cases where programs have moved away from fee-for-service payment models, modified HEDIS® protocols will be used to assure data is complete and accurately adjusted. Specifically, modifications will be made to the following HEDIS® measures to account for alternative payment models: follow-up after hospitalization for mental illness (7 and 30-days); and initiation and engagement in treatment for alcohol and other drug dependence. Any additional modifications will be determined by the evaluators and AHS and catalogued in each evaluation report.

Blueprint for Health Population Adjustments

Blueprint for Health is a multi-payer reform effort, as such data is typically aggregated for the entire population irrespective of payer. Through its analytics vendor, Onpoint Health Data, Blueprint to Health links provider reported clinical data to de-identified VHCURES claims data. Onpoint de-identifies the clinical data using the same algorithms to hash the identifiers as was used by insurers for the VHCURES data, using this method the vendor is able to link records between the two de-identified datasets using the hashed, or encrypted, identifiers. Blueprint to Health diabetes measures will be analyzed by its vendor and a stratified for the Medicaid population.

Annually, the Blueprint to Health examines total expenditures and specialized program expenditures for Medicaid patients attributed to Blueprint practices. However, prior to examining findings, the vendor first risk-adjusts the expenditure values. To do so, extreme values are capped, and a regression-based adjustment procedure is used to create an individual-level risk-adjusted expenditure value. The average of this risk-adjusted value is reported.

Historical Data

Vermont's baseline data refers to historical data points available for review, trend analysis and longitudinal examination. The most recent findings for overall GC efforts, including a focused study of Vermont IMD authorities can be found in the Interim Evaluation Report #1 submitted April 1, 2018 to CMS [Found Here](#).

On-going performance monitoring and existing evaluation efforts generated in addition to the formal evaluation reports identified in the STCs can be found online as outlined below.

IV. METHODOLOGICAL LIMITATIONS

Vermont's Global Commitment to Health Section 1115 demonstration, is a long standing project initiated in 2005, which incorporated a Medicaid expansion project that began in 1999. Demonstrations served individuals and families up to 300% FPL prior to the most recent Affordable Care Act (ACA) changes. In 2013 Vermont transitioned to the ACA and the State's LTSS program was also incorporated under the overarching umbrella of the Global Commitment to Health demonstration.

Under the demonstration, Medicaid eligibility is synonymous with enrollment in the public managed care-like model. This makes traditional time series, comparison and/or control groups not attributed to the demonstration difficult. Vermont's decade long commitment to health care reform and the comprehensive nature of the demonstration offer several additional challenges for evaluation design.

Dual Eligible Members

Many participants in Vermont's specialized programs are dually eligible for Medicare and Medicaid. The absence of Medicare claims data presents challenges for certain metrics such as total cost of care, rates of preventive screens, follow-up after hospitalization. The stratification of measures for sub-population of enrollees who receive specialized services is impractical in most circumstances. As Medicare reforms mature, the AHS will seek access to Medicare data as part of its involvement in the All-Payer Model Medicare demonstration.

Existing Payment Reforms

As reported earlier, Vermont has been engaged in health care and payment reform since the inception of the demonstration in 2005. In many cases, specialized programs no longer employ fee-for-service claiming and encounter data may be stored in multiple legacy systems across AHS. In cases where programs have moved away from fee-for-service payment models, modified HEDIS® protocols, noted above, will be used to assure data is complete and accurately adjusted when stratified for specialized populations.

Isolation from Other Initiatives

In general, external factors are not expected to significantly affect the assessment of hypotheses presented in this evaluation plan. Over the past several years the State sought to align its health care reforms across all populations and payers. The final Medicaid demonstration extension and Medicare All-Payer Model were designed to create a seamless system. However, where market conditions and other contextual factors (e.g., provider or geographical differences) could have an impact, AHS and its evaluators will develop approaches to quantify and/or isolate the impact of such factors.

Based on staff, budget and data considerations, the State will explore the feasibility of comparing outcomes for members who may be attributed to a specific initiative with those who are not involved in the initiative.

Administrative Data Limitations

Data used in this analysis includes multiple administrative data sets. Limitations include: inconsistent data collection across sub-populations; inclusion of other payers; inconsistent data entry across provider or service types; lack of available data for all study years due to changes in IT systems or data storage methods. These inconsistencies will be reviewed to limit the impact on design rigor.

Two data sets available for benchmarking performance are the VDH Hospital Discharge data and VHCURES. These data warehouses provide valuable information on claims over time, however information is de-identified. The Blueprint for Health and the Department of Mental Health have employed various techniques to match data and examine population trends overtime and by payer. The DMH technique involves the use of probabilistic estimation. Probabilistic Population Estimation (PPE) is a statistical technique used by DMH that measures the number of people represented in data sets that do not share unique person identifiers. PPE reports how many people are represented in and across data sets without the need for identifiable protected health information.⁵ These estimates are based on a comparison of the observed distribution of dates of birth in HIPAA-compliant "limited data sets" with the expected distribution of dates of birth. The validity and reliability of this procedure have been demonstrated by Banks and Pandiani (2001).⁶ This approach is unobtrusive and it protects the personal privacy of individuals and the confidentiality of medical records because it does not depend on personally identifying information⁷.

Through its analytics vendor Onpoint Health Data Blueprint to Health links clinical data to de-identified VHCURES claims data. Onpoint de-identifies the clinical data using the same algorithms to hash the identifiers as was used by insurers for the VHCURES data, using this method the vendor is able to link records between the two de-identified datasets using the hashed, or encrypted, identifiers.

ATTACHMENTS

1. PROCUREMENT STRATEGY AND EVALUATOR QUALIFICATIONS

Procurement for an evaluation contractor to assist the State in executing its demonstration evaluation plan was pursuant to the State of Vermont Agency of Administration Bulletin 3.5 processes [found here](#).

The State retains responsibility for rapid cycle assessment reports, monitoring delivery system and other investments and overall demonstration performance monitoring, including the SUD Monitoring Plan. Global Commitment to Health HEDIS® measures are independently validated by the State's External Quality Review Organization (EQRO). To mitigate any potential conflict of interest, the evaluation contractor is responsible for secondary analysis of the State's findings, benchmarking performance to national standards, evaluating changes over time, isolating key variables and interpreting results. As part of the focused IMD evaluation, the evaluator was responsible for final measure selection, identifying, if viable, other State systems that may serve as comparisons, conducting all data analysis, and measuring change overtime to address study questions.

The State issued one procurement for all summative evaluation activities and the production of required CMS reports. Bidders were given the option of working with a subcontractor on the IMD and/or other components of the design. The successful bidder demonstrated, at a minimum, the following qualifications:

- The extent to which the evaluator can meet State RFP minimum requirements;
- The extent to which the evaluator has sufficient capacity to conduct the proposed evaluation, in terms of technical experience and the size/scale of the evaluation;
- The evaluator's prior experience with similar evaluations;
- Past references; and
- Value, e.g., the assessment of an evaluator's capacity to conduct the proposed evaluation with their cost proposal, with consideration given to those that offer higher quality at a lower cost.

2. EVALUATION TIMELINE

The State's evaluation budget and timelines are tentative pending data sharing schedules established with the evaluation contractor and annual legislative budget approvals. The timeline and budget may be modified if terms of the current demonstration agreement are amended during the project period. AHS will report on progress and any known challenges to the evaluation budget, timelines and implementation in its quarterly and annual demonstration reports to CMS. Attachment 3 provides an overview of the AHS proposed evaluation budget. Outlined below and on the following pages are the expected timelines and major evaluation related milestones.

3. AHS PROPOSED EVALUATION BUDGET

The Vermont Global Commitment to Health Section 1115 demonstration evaluation includes state administrative staff and an independent evaluator. Assuming no further changes to the Evaluation Design, independent evaluator costs are expected to be \$681,160 for the evaluation period 2017-2022. The estimated budget amount will cover independent evaluation expenses, including salary, fringe, administrative costs, other direct costs such as travel for data collection, conference calls, etc., as well as, all costs related to quantitative and qualitative data collection and analysis, and report development.

Vermont AHS will also incur costs for state staff to efficiently and effectively support the independent evaluator. State costs are expected to be similar to the level needed by the independent evaluator. That is, state data, analytic, and research staff will have to undertake data gathering, prepping, and submitting information to the evaluator in line with the research goals and objectives.

State researchers will provide technical assistance, will create intermediate data products, will share their in-depth knowledge of existing state programs; state populations; Medicaid operations; and will leverage existing relationships with partner organizations. They will also provide information on state IT, local and provider information technology systems as well as; data structures, collections, definitions; and compliance with state policies such as privacy and security.

A description of external evaluator costs by deliverable area is provided in Exhibit A-1 below.

Exhibit A-1 Independent Evaluation Budget

Evaluation Budget: Global Commitment to Health Section 1115 Demonstration (January 1, 2017 - October 30, 2022)							
Project Task Area	Year 1 2017	Year 2 2018	Year 3 2019	Year 4 2020	Year 5 2021	Year 6 2022	Total by Task
Project Initiation & Final Evaluation Design	\$21,720						\$21,720
IMD Sub-evaluation	\$46,800	\$31,200					\$78,000
Periodic Rapid Cycle Assessment Reports and Innovative Changes	\$5,680	\$8,240	\$7,680	\$7,680	\$7,680		\$36,960
Interim Evaluation Report #1	\$38,960	\$114,600	\$10,240				\$163,800
Interim Evaluation Report #2			\$30,600	\$92,400	\$10,240		\$133,240
SUD Mid-Point Assessment			\$41,960	\$61,800			\$103,760
Summative Evaluation Report					\$53,440	\$53,440	\$106,880
Other Project Activities		\$7,360	\$7,360	\$7,360	\$7,360	\$7,360	\$36,800
Annual Total	\$113,160	\$161,400	\$97,840	\$169,240	\$78,720	\$60,800	\$681,160
